

In Latin America, it is estimated that **1 IN EVERY 5 CASES** of invasive meningococcal disease (IMD) **WILL DIE**.

Meningococcus (*Neisseria meningitidis*) can cause invasive meningococcal disease (IMD) that can lead to **MENINGITIS, SEPTICEMIA / MENINGOCOCCEMIA** (blood infection) or both.

These diseases cause **PERMANENT DAMAGE** such as deafness, blindness, loss of limbs, learning delays,
